Summary

This url earns a **GRADE A**. Its average speed of 2.73 s (last 30 days) is in the 86th percentile of all urls being tested.
You are trending **NO TREND YET** compared to the previous week's average (N/A last week to 2.73 s this week).

Metric Detail

TTFB: time to first byte, ie how long it takes for your server to start sending data

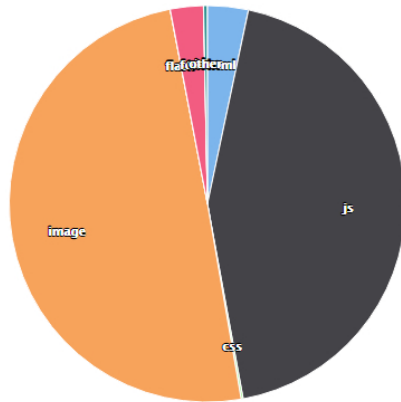

Speed Index: seconds for most of your above-the-fold view to be rendered

Doc Load: seconds for the html document to load

Interactive: seconds before the page can respond to user actions, aka 'TTI'

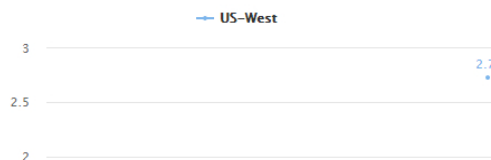

Page Complete: seconds for the entire page, including all resources and images to load

Recent Resource Breakdown

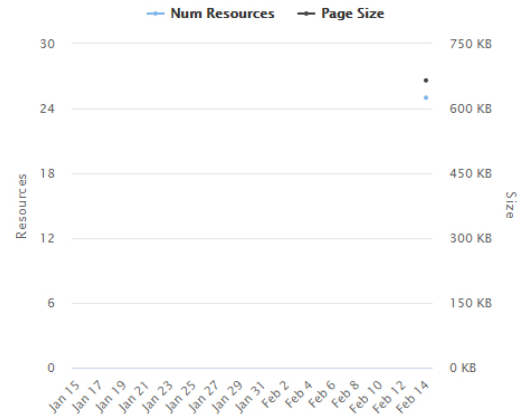

From the most recent test, the % of resource type based on size. This should be a fairly equal spread, so if something is taking a majority you know what to improve upon.

Page Complete By Region

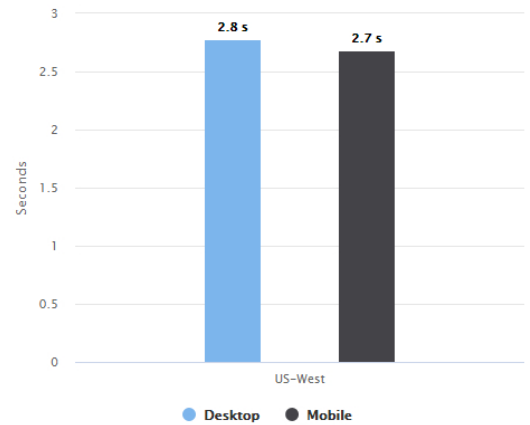

Page Size

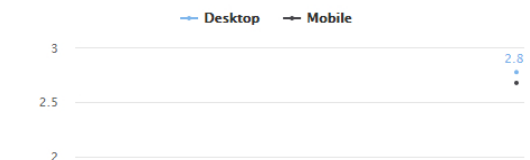

Average size of a webpage is 2.5MB, but that's huge. Try to stay below 1.5MB. Under 500KB is exceptional.

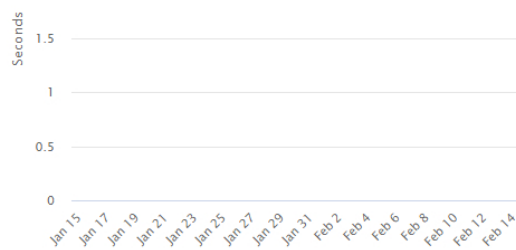

Page Complete By Region+Device

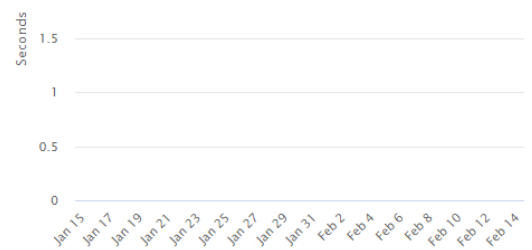

Overview of how your page performs via region and device

Page Complete By Device

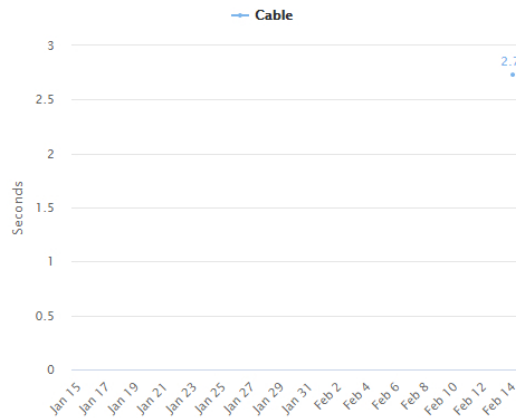

Do you cater to a worldwide audience? If so, you should ensure all load times are about the same for each region.

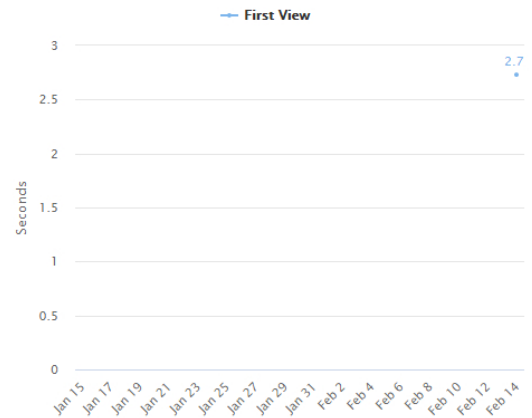

Almost half of all internet traffic is mobile, yet they have 3x slower connections than most desktop users. Aim for your mobile site to be vastly quicker than desktop.

Page Complete By Connection

While the average ISP connection speed is increasing, don't underestimate how slow some connections can be.

Page Complete By View

If your visitors typically see more than one page, your repeat view is very important. Make sure you're caching what you can so that anyone seeing a similar page twice doesn't download everything from scratch.

Best and Worst (First View)
